Maintenance items

May 2013 fixes

Fixes from version s9267.10051.0 to version s9267.10057.0

● Some CDs with pre-emphasis would have low volume when played back. This has been fixed.

● When turning the unit on again after it had been in standby, the tone settings (BASS and TREBLE) would be changed. This has been fixed.

● The digital input frequency display would occasionally blink during playback. This has been fixed.

● The number of characters used was insufficient for some wireless security types. This has been fixed.

   Number of characters that can be used: 63 ASCII
   Number of input characters: 64 hexadecimal digits (256-bit)
